

SUREDROP FOR MANAGED SERVICE PROVIDERS

SureDrop is the most secure file sharing, synchronisation and collaboration application available.

Leveraging Senetas encryption security expertise, it is optimised for as-a-service deployment by Managed Service Providers and provides customers with 100% control over data sovereignty.

SureDrop® is available to Telecommunications, Cloud and Managed Service Providers as a custom security add-on. Ease of implementation means SureDrop® may be added to any customer's as-a-Service proposition with no management overhead.

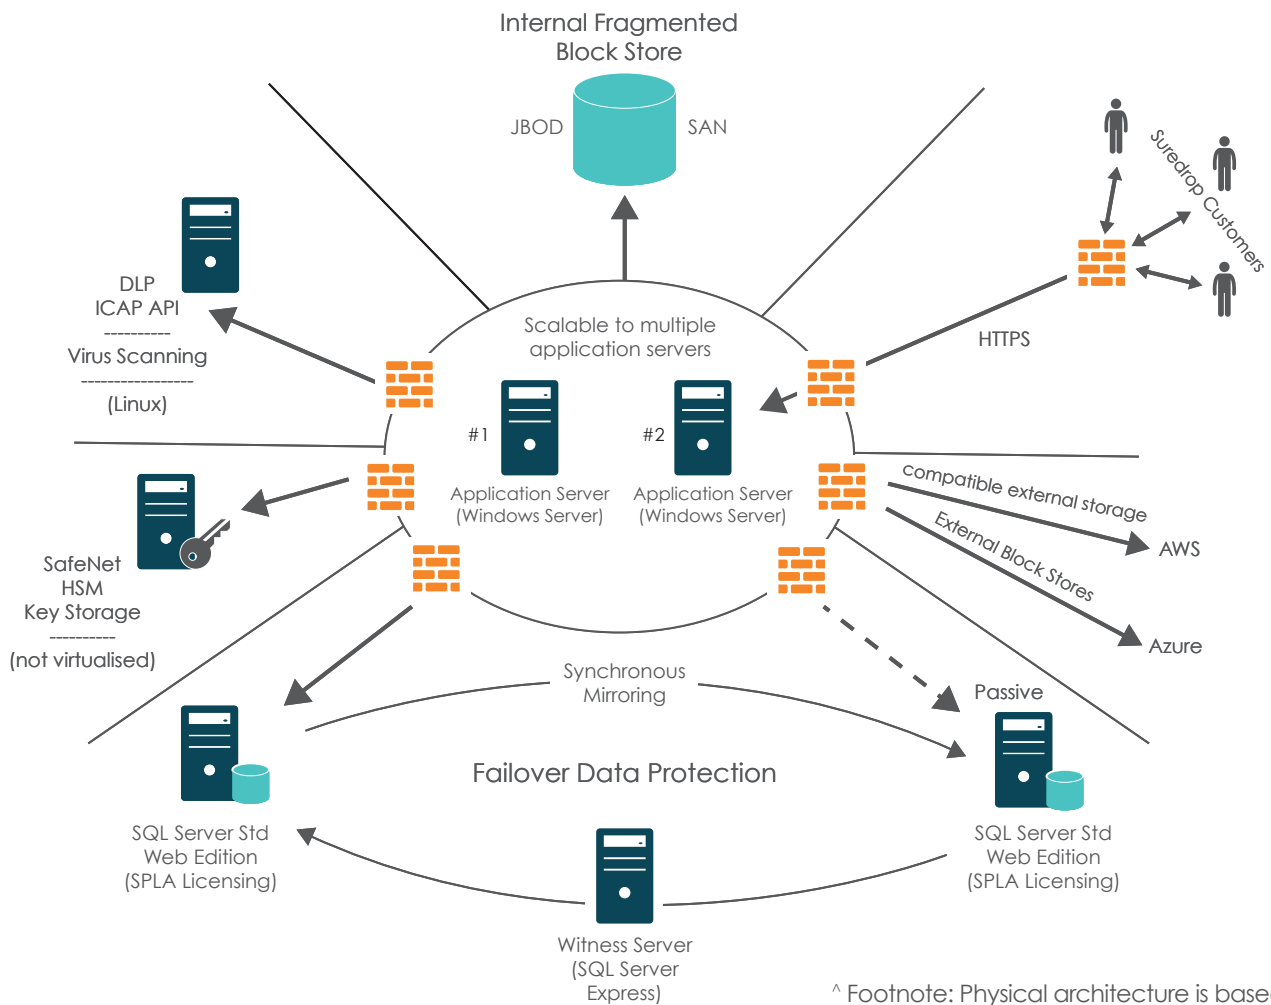

SureDrop® represents the ideal opportunity to provide a value-add service that delivers unrivalled security for document sharing, synchronisation and collaboration.

Key Features For Managed Service Providers

- > SureDrop has been developed with uncompromising encryption security as its primary objective; but this does not mean it has had to sacrifice on simplicity or user experience.
- > Developed specifically to meet the requirements of Managed Service Providers (MSPs) and their customers; enabling white-label customisation and deployment.
- > Management made easy with integrated active user and storage metrics.
- > Automatic scaling architecture enables stateless addition of application servers without the need for configuration.
- > Use of the Microsoft Windows technology stack makes administration simple and intuitive.
- > SQL Server based, for simplified reporting, back-up and maintenance.
- > Centralised core database with secure customer data isolation, providing full confidence and separated customer management.
- > Block data storage of encrypted, fragmented, compressed and de-duplicated data; providing built-in redundancy at the application level.
- > Enables the use of SAN or any low-cost storage (JBOD).
- > Maximum encryption key security and key management, based on seamless integration with Gemalto's SafeNet Luna HSM.
- > Support for off-the-shelf Data Leakage Protection (DLP) and Anti-Virus tools, plus other open source tools that support ICAP.
- > Supports Windows and SQL Server (v2008 R2 and above).
- > Service Providers may install SureDrop onto an existing Virtual Machine (VM) image or pre-configured/packaged application server, as a VM provided by Senetas.
- > Designed for rapid, fuss-free installation and customer deployment.

- > Online support is provided by product specialists.
- > Technical pre-sales support is provided to assist with solution architecture and customer solution design requirements.
- > Senetas is committed to SureDrop's on-going development, providing new features to meet evolving customer needs and helping to ensure SureDrop remains the best-in-class solution.
- > Like all Senetas encryption products, the SureDrop development road map is customer focused; designed to deliver the best data security and user experience.
